bpost Shipping manager

 Do not forget to fill in shipping address into Preferences > Store Contacts > Contact Details!

Description

bpost Shipping Manager is a service offered by bpost, allowing your customer to choose their preferred delivery method when ordering in your webshop. The following delivery methods are currently supported:

- Delivery at home or at the office
- Delivery in a pick-up point or postal office
- Delivery in a bpack 24/7 parcel machine

When activated and correctly installed, this module also allows you to completely integrate the bpost administration into your webshop. This means that orders are automatically added to the bpost portal. Furthermore, if enabled, it is possible to generate your labels and tracking codes directly from the Prestashop order admin page. No more hassle and 100% transparent!

 [Documentation](#)

Account settings

Important You need a user account from bpost to use this module. Call 02 0201 11 11. Only here to test? Key in 999033 as account ID and DEMO_SHM as passphrase.

Account ID

Your 6 digits bpost account ID used for the Shipping Manager

Passphrase

The passphrase you entered in bpost Shipping Manager back-office application. This is not the password used to access bpost portal.

API URL

Do not modify this setting if you are not 100% sure of what you are doing

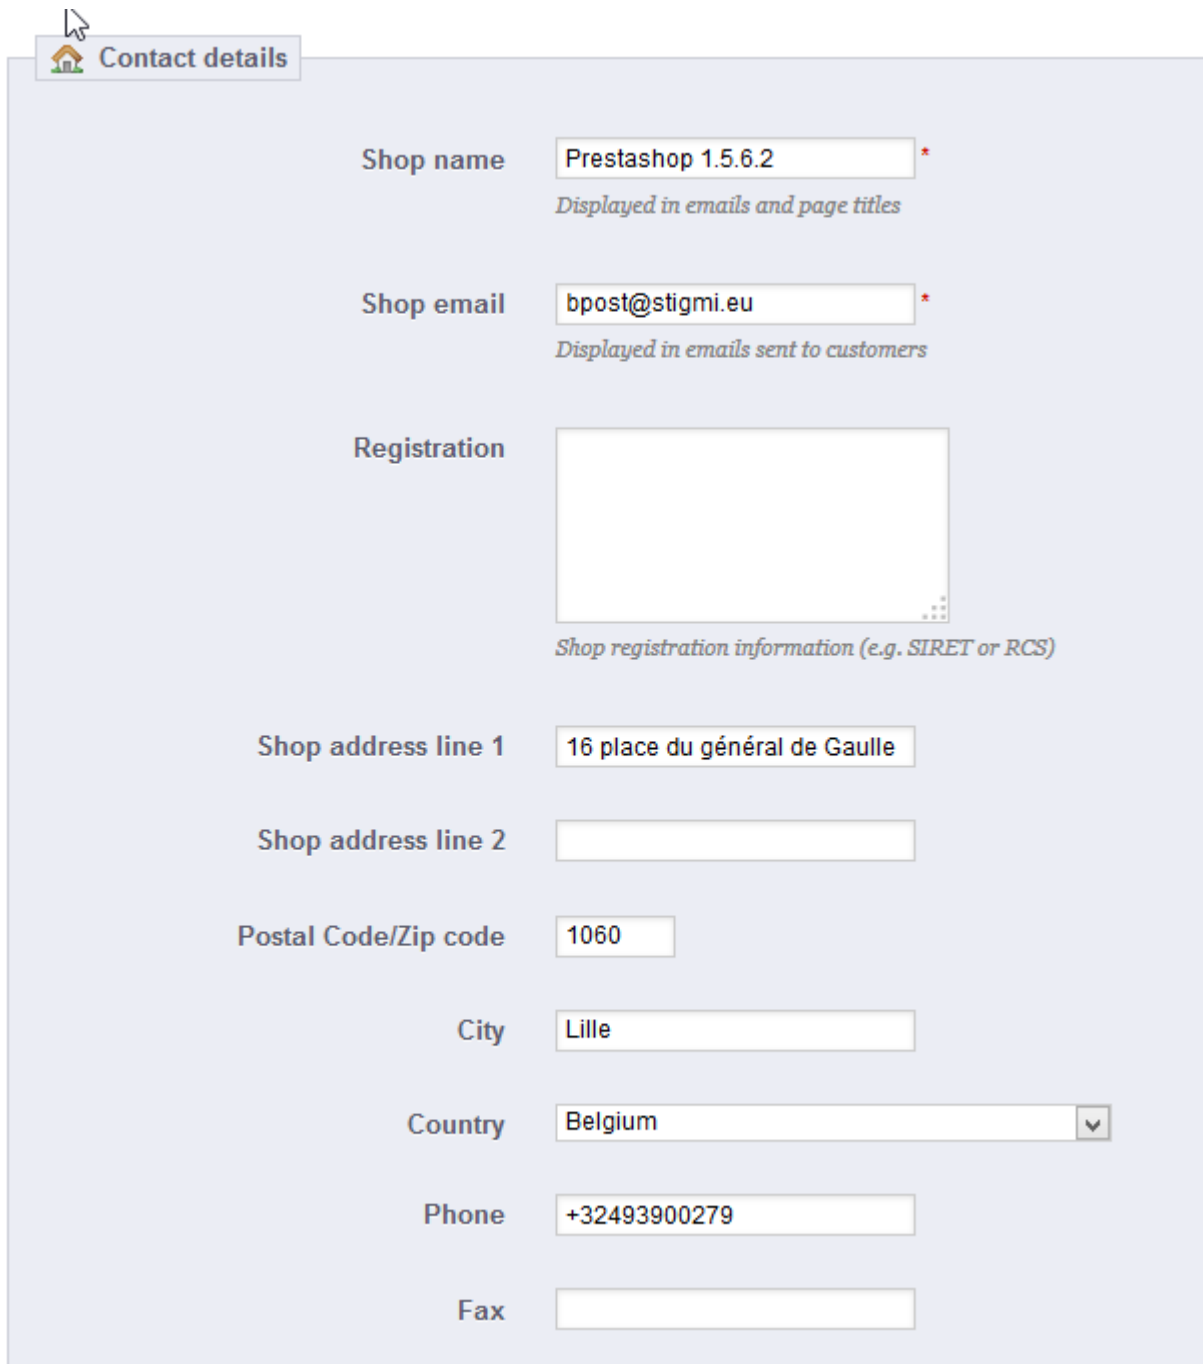

Label settings

Use PrestaShop to manage labels  

If you enable this option, labels are generated directly within PrestaShop. It is not needed to use the bpost Shipping manager for these tasks.

[Click here](#) to learn more about this option. 

3. Configure « Preferences » >> « Store contacts »
